Foreword to the Second Edition by the CRA Chairman

A hallmark of the Commission on Revenue Allocation is its commitment to promote an equitable society in Kenya as envisaged in the Constitution. This commitment is shared by all commissioners and staff.

The Commission was established in December 2010 under Article 216 of the Constitution. Its principal function is to make recommendations on the basis of equitable sharing of revenue raised nationally between the national and county governments, and, among the county governments. The Commission has several other functions enumerated in Article 216 of the Constitution. These include; (i) making recommendations on matters concerning the financing of, and financial management by county governments, (ii) enhancing revenue sources of the national and county governments, and, (iii) determining, publishing, and regularly reviewing a policy criteria by which to identify marginalized counties for purposes of the Equalization Fund.

Reliable statistical data are key to the Commission's functions and is vital for policy formulation and analysis. This edition provides an update of the summary data and also introduces new data such as (i) HIV data under the health outcomes, (ii) the 1999 population, and (iii) county population growth rate for the period 1999 to 2009. At a glance, the Fact Sheets provide important yet simplified data for each county on: population, health, education and infrastructure. No other single book has ever attempted to provide county-specific data in such a manner.

The data on each of the 47 counties is useful to many stakeholders, including; national and county government political leadership, the executive and other policy makers. It will also be useful to development partners, academic institutions and the public service in both national and county governments. The book is part of a series of publications which have been launched by the Commission to provide data that will inform policy formulation and planning under Kenya's new system of devolved government.

Every effort has been made to ensure the facts in this second edition are accurate. We would however, request anyone who spots a major error to point it out to us through our contacts indicated at the back cover of this book.

Micah Cheserem
Chairman, Commission on Revenue Allocation

Acknowledgements

This booklet would not have been possible without the contribution and support of several key partners.

First, the Commission acknowledges the contribution of the Kenya National Bureau of Statistics (KNBS), which is the official source of most data appearing in this booklet. Contributions from KNBS signal a partnership in the generation and dissemination of comprehensive county-level data, and its application towards the formulation of sound policy decisions not only by the CRA, but also by government agencies, and stakeholders.

Secondly CRA acknowledges both the financial and technical support from DFID, Australian AID and the World Bank. This support has gone a long way in building not only the publication of this second edition of the booklet, but also in enriching the Commission's experience and knowledge on the intricacies of data gathering, analysis and dissemination.

The Commission is grateful to all our partners, and looks forward to their continued support.

Abbreviations and Acronyms

AIDS	Acquired Immuno-Deficiency Syndrome
CDF	Constituency Development Fund
CRA	Commission on Revenue Allocation
DDP	District Development Plan
DFID	Department for International Development
DHIS	District Health Information Software
DRC	District Roads Committee
EPP	Estimates and Projections Package
FDKP	Fiscal Decentralization Knowledge Program
GoK	Government of Kenya
HMIS	Health Management Information Systems (of the Ministry of Health)
HIV	Human Immunodeficiency Virus
KAIS	Kenya Aids Indicator Survey
KDHS	Kenya Demographic Health Survey
KIHBS	Kenya Integrated Household Budget Survey
KNBS	Kenya National Bureau of Statistics
KRB	Kenya Roads Board
KURA	Kenya Urban Roads Authority
LA	Local Authority
LATF	Local Authority Transfer Fund
MoH	Ministry of Health
NASCOP	National AIDS and STIs Control Programme
REPLF	Rural Electrification Programme Levy Fund
RMLF	Road Maintenance Levy Fund
SBP	Single Business Permit
STI	Sexually Transmitted Infections
TFDG	Task Force on Devolved Government
UN	United Nations
WB	World Bank

Description of the Data, Sources, Year of Coverage and Collection Frequency

Data / Variable	Description and Source	Year & Collection Frequency
Population and estimated population growth rate	The data on population are from the 1999 and 2009 Kenya population and housing census for respective years. The estimated population growth rates per county are computed based on the two censuses, and is computed using compound annual growth rate (CAGR) method. Constituency population reflects distribution of the 2009 population across the new 290 constituencies. Source: Kenya National Bureau of Statistics (KNBS) Census.	1999 and 2009 Decennial
Surface area and density	Population density variations within each county are based on the number (and surface area) of districts in existence in December 2008. Source: KNBS 2009 Census.	1999 and 2009
Number of districts	The population density maps are based on a total of 158 districts in existence at the time of the 2009 Census. Source: KNBS 2009 Census.	2009
Poverty gap index	This is an estimation of the depth of poverty, or how far, on average, the poor are from the poverty line. This is the index reflected in the criteria for allocating the equitable (horizontal) share of national revenue between counties. Source: KNBS (2012) County Poverty Trends, based on WMS II (1994), WMS III 1977 and KIHBS (2005/06)	2005/06
Urban population	Urban population includes “core urban” and “peri-urban” residents living in towns with at least 2,000 inhabitants. Source: KNBS 2009 Census.	2009 Decennial
Fully-immunized population under 1 year	This is the number of fully immunized children below the age of 1 year as a proportion of the overall population of children below the age of 1 year. Source: Division of Health Management Information Systems (HMIS)	March 2013 Monthly
Malaria burden	This reflects confirmed malaria cases (i.e. not clinical malaria) as a proportion of first-time attendees to the OPD (out-patient diseases) units of health facilities. Source: Division of Health Management Information Systems (HMIS)	March 2013 Monthly

Data / Variable	Description and Source	Year & Collection Frequency
TB in every 100,000 people	This is based on new cases of tuberculosis (TB) detected in every 100,000 people. Source: Division of Health Management Information Systems (HMIS)	March 2013 Monthly
HIV data	<p>HIV Estimates were generated using UN approved mathematical modelling software, EPP spectrum that generates the HIV estimates by using HIV program reports, surveillance and surveys and population data from census projections. Service delivery data was extracted from the integrated health facility reporting software (DHIS), early infant diagnosis program while the survey/ surveillance data used was HIV sentinel surveillance since 1990, KDHS 2003 and 2008/9 and KAIS 2007. Accordingly:</p> <ul style="list-style-type: none"> • HIV prevalence: The proportion of adults aged > 15 years and above, which was HIV infected in 2011. This estimate includes both new and old cases. • People living with HIV: The number of persons living with HIV as at 2011 and includes both adults and children. • New infections: Persons who were newly infected with HIV during 2011. <p>Source: NASCOP</p>	2011
Education data	The proportion of population with primary and secondary education. Source: KNBS 2009 Census.	2009 Decennial
Constituency Development Fund	These data are CDF actual allocations (2003/04 – 2011/12). Source: CDF Board Website http://www.cdf.go.ke/	7 years since 2005/06 Annual
LATF, RMLF, SBP and property rates	Taken together LATF, SBP and property taxes have constituted the majority of resources available to Kenya's defunct Local Authorities. LATF might be used as an indicator of future needs of urban areas, and of the partial costs that could be faced by counties in delivering services. SBP and property taxes might be taken as a rough indicator of the core of county government's own-source revenue streams. Source: MoLG's LATF Annual Report and Review of Local Authority Financial Performance	2010/11 Annual
Rural Electrification Programme Levy Fund (REPLF)	These data show approved (not actual) spending on rural electrification programmes. Source: Rural Electrification Authority (REA)	6 years since 2006/07 Annual

Data / Variable	Description and Source	Year & Collection Frequency
Access to improved water, improved sanitation and electricity	The proportion of Kenya households with access to improved water and sanitation sources, as well as access to electricity. Definitions for access to improved water and sanitation are based on the Joint Monitoring Programme (JMP) for Water Supply and Sanitation by the World Health Organization (WHO) and UNICEF. Accordingly, improved water sources include well/borehole, piped and rain-harvested water; while, improved sanitation includes connection to a main sewer, septic tank and cesspool as well as ventilated improved pit (VIP) latrine and covered pit latrine. Source: KNBS 2009 Census.	2009 Decennial
Road Network	Data shows the classification of Kenya's roads network by length (km) i.e. whether rural or urban; whether paved or unpaved; and, if municipal or not. Source: Kenya Roads Board (KRB)	2012
Proportion of nationally registered voters per constituency	Data shows each county's share of nationally registered voters as at December 2012. Source: Independent Electoral and Boundaries Commission (IEBC)	December 2012
Number of nurses and doctors	This data provides the basis for computing population served by each nurse and each doctor. Source: Division of Health Management Information Systems (HMIS)	March 2013 Monthly

What does the data say?

These Fact Sheets testify to inter-county variations on several fronts, and it is important for the reader to consider implications of these differences. For example, the demographic data presented in the first part of the Fact Sheets reveal extensive variations in county populations, population growth rates and densities. Both population and density are major determinants of the cost of delivering services in the counties. Among the five adopted parameters for allocating the equitable share of nationally raised revenues among counties, population is the most prominent, with a 45% weight. The objective is to resource counties to deliver services equally on a per capita basis.

The socio-economic profile of Kenya's population and hence the social fabric of its counties is quite heterogeneous. While Kenya is urbanizing rapidly - much

faster than the overall population growth rate - the Fact Sheets show that most counties are still predominantly rural. Only five counties are more than 50% urban and majority of counties have at least 80% of their populations residing in rural areas. (See figure below). This is important from a political economy point of view. Most County Assembly representatives were elected from rural constituencies: the challenge now is to protect service delivery in urban areas which are poles of economic development (thanks to agglomerations effects) and have potential of generating the bulk of county revenues.

Apart from population, design of the fiscal transfer formula was also significantly influenced by the distribution of poverty, which has a 20% weight. The Fact Sheets highlight wide disparities in the distribution of poverty across Kenya, which is why the fiscal transfer formula aims to promote redistribution in favour of historically lagging areas. The Fact Sheets also suggest

a connection between high poverty and access to social services, urbanization or infrastructure development. To assess the performance of Kenya's counties in meeting the service and development needs of their population, it will be vital to develop systems for tracking poverty reduction at the county level over time.

A major limitation in preparing the Fact Sheets has been the absence of comprehensive fiscal information—revenues and expenditures—at County level. In particular it has been impossible to understand the geographic distribution of historical spending by the central government and therefore to develop a complete and clear picture of financial flows at the local level. Fortunately, the Local Authority data displayed in the Fact Sheets provide some useful though imperfect indications of: i) the types of costs that counties might be faced with e.g. urban service and infrastructure development costs; and, ii) potential local revenue sources that counties could exploit to complement transfers from the national government. The funding data shown in the Fact Sheets captures only the partial historical fiscal positions of different counties, but comparing it with proposed allocations in 2013/14 under the equitable share reveals that the adopted formula is highly redistributive.

With specific reference to Local Authorities, transfers from the central government have previously comprised approximately 40% of local incomes, with property rates and business permits making up the biggest components of own-source revenues, especially for urban authorities. Rural authorities generally relied almost 50% on transfers except in regions with natural resource endowments e.g. game parks. The important point here is that, due to geographic differences, counties will have varying capacity to generate revenue from their own resources. As Counties assume responsibility for devolved functions they will require more and more budgetary resources, but local revenues are unlikely to grow sharply beyond what LAs collected. This means that the equitable share will remain an important funding stream, and the CRA is obligated to review future generations of the fiscal transfer formula to ensure that counties are adequately funded to meet their functions while taking into account own-revenue potential. Consistent with its mandate, the CRA will work with county governments to identify and enhance own source revenues. This is essential to minimize fiscal stress and dependence by counties on transfers. The focus of county governments should therefore be on wealth creation, which will no doubt have multiplier effects within and across counties.

Only five counties are more than 50% urban

The data on education and health, water and sanitation, access to electricity and the road network all tell the story of historical inequities and to some extent of the failure of a centralized state to equalize opportunities for all Kenyans (see County Pattern maps below). Kenyans have embraced devolution with such passion because they expect that it will help fill these service delivery gaps. Again, tracking county performance over time on these indicators will provide a good measure of the extent to which the constitutional promise has been met. In addition identifying good performers among Kenya's counties will generate lessons for others to emulate.

As stated in the Foreword to this publication, data is the cornerstone of firm policy decisions. Consequently, it is the intention of CRA to work with all relevant agencies, particularly the Kenya National Bureau of Statistics (KNBS) to ensure that under Kenya's new system of devolved government, decisions on the equitable sharing of revenue are evidence-based, objective, trusted and predictable. In collaboration with the KNBS and other relevant agencies, the CRA will also ensure that data definitions and norms are standardized, and that data collection and reporting

mechanisms are synchronized across all counties. Especially, it will be the goal of the CRA to establish consensus around baseline data. To this end, data that will be used by the CRA in formulating its revenue-sharing recommendations will need to be accurate, regularly updated, independent and free of any local manipulation.

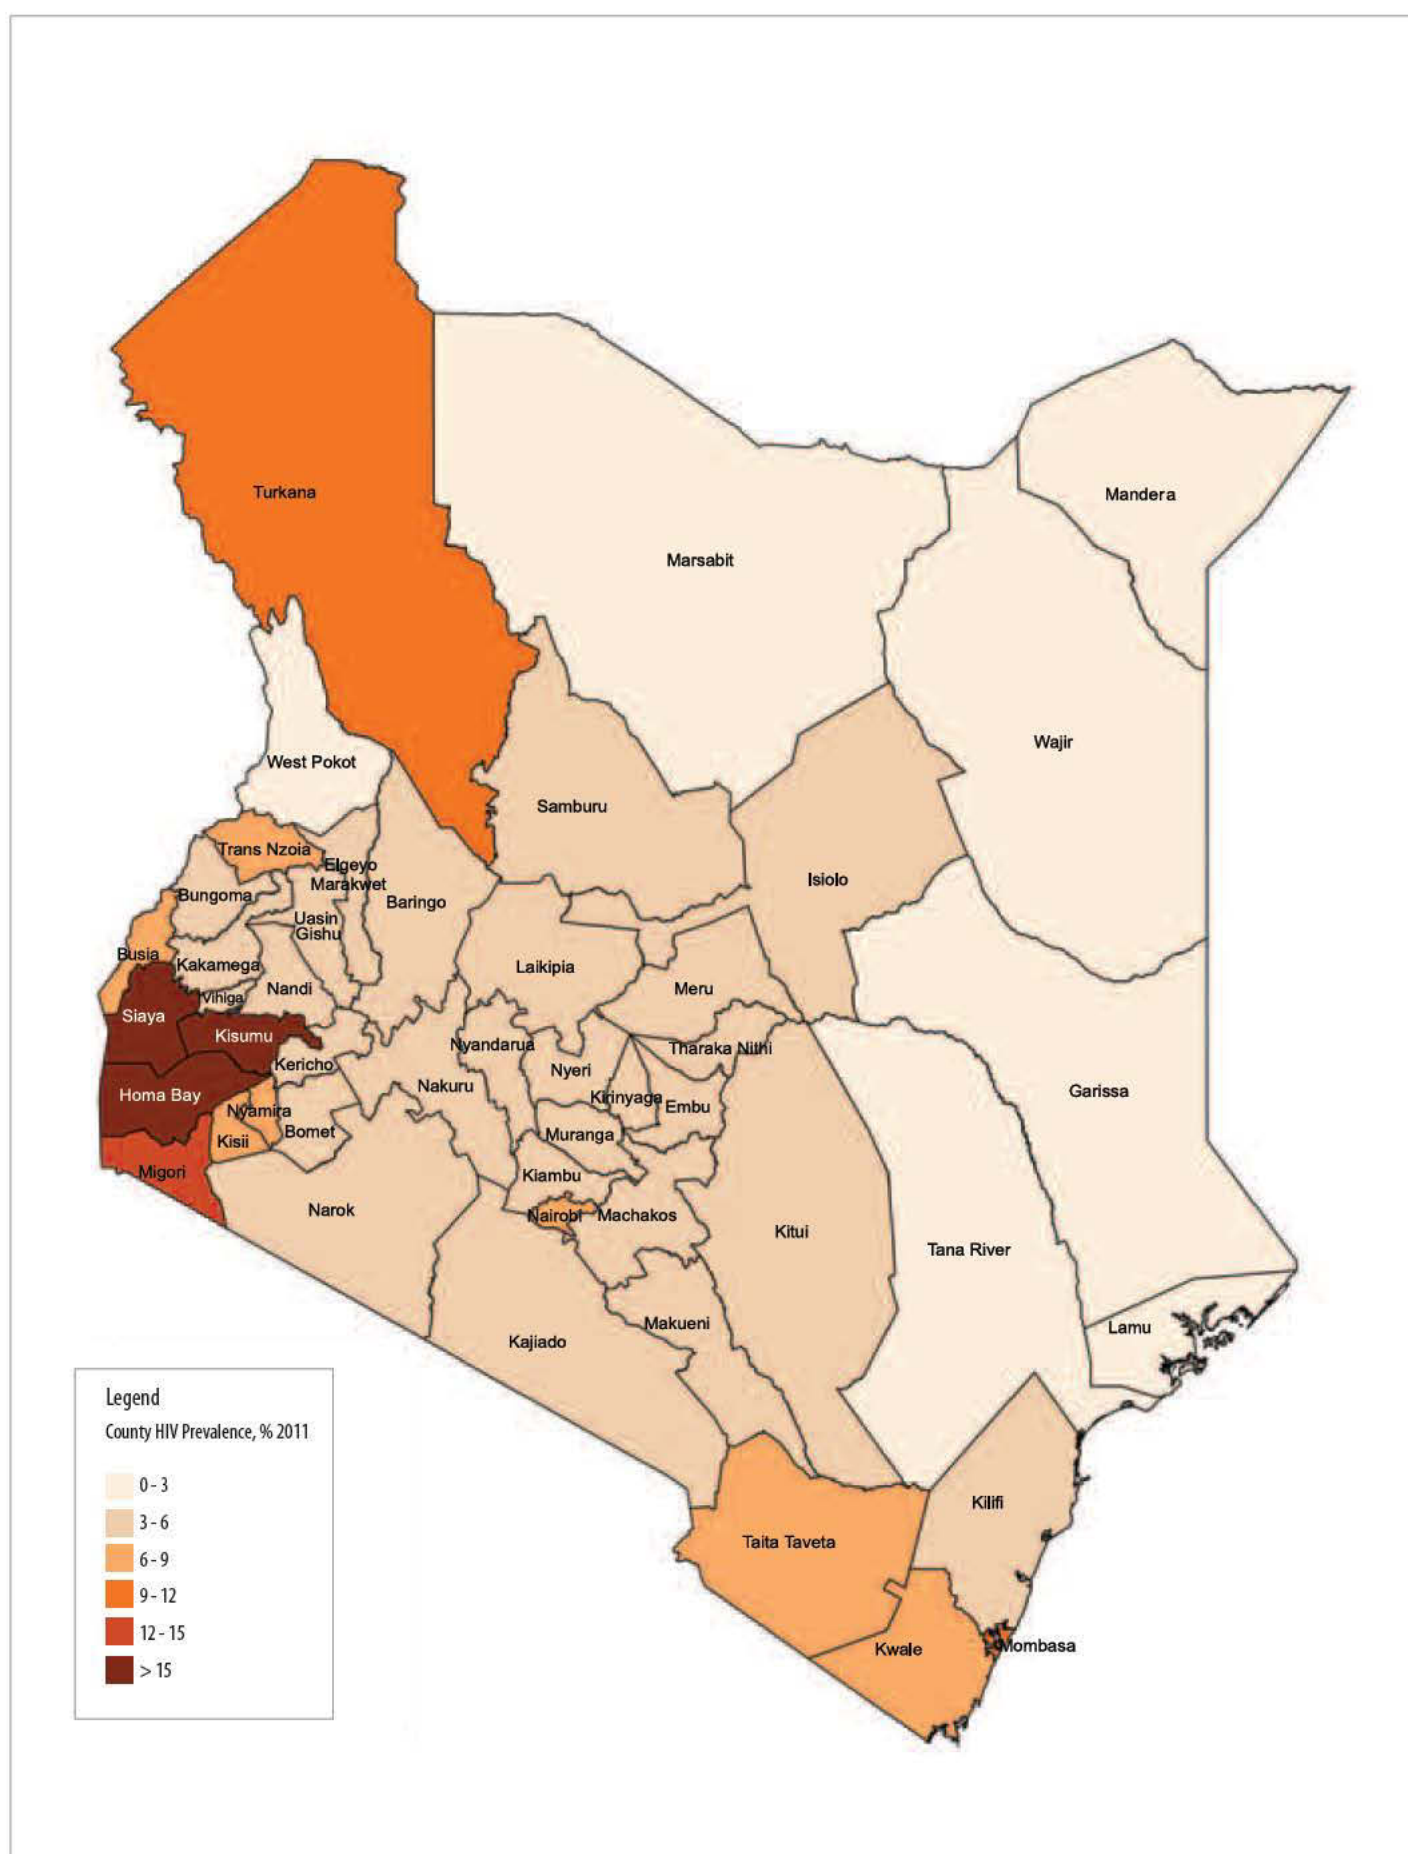

These Fact Sheets are obviously incomplete. Perhaps the most glaring omission is information on county contributions to Kenya's Gross Domestic Product (GDP), which to date has not been disaggregated below the national level. Nonetheless, the CRA has settled on the option of releasing this second edition of the Fact Sheets, so that the information therein might contribute to successful transition to a devolved system of government. Specifically, the CRA hopes that this publication will enable county governments to identify their immediate service delivery priorities, and also support critical devolution-related policy decisions and public debate. The Kenya County Fact Sheets will be updated periodically as part of what must become a regular exercise of data collection and performance tracking at the local level. The CRA invites all readers of this publication to submit their suggestions for future publications.

Counties will have varying capacity to meet service delivery costs from their own revenues

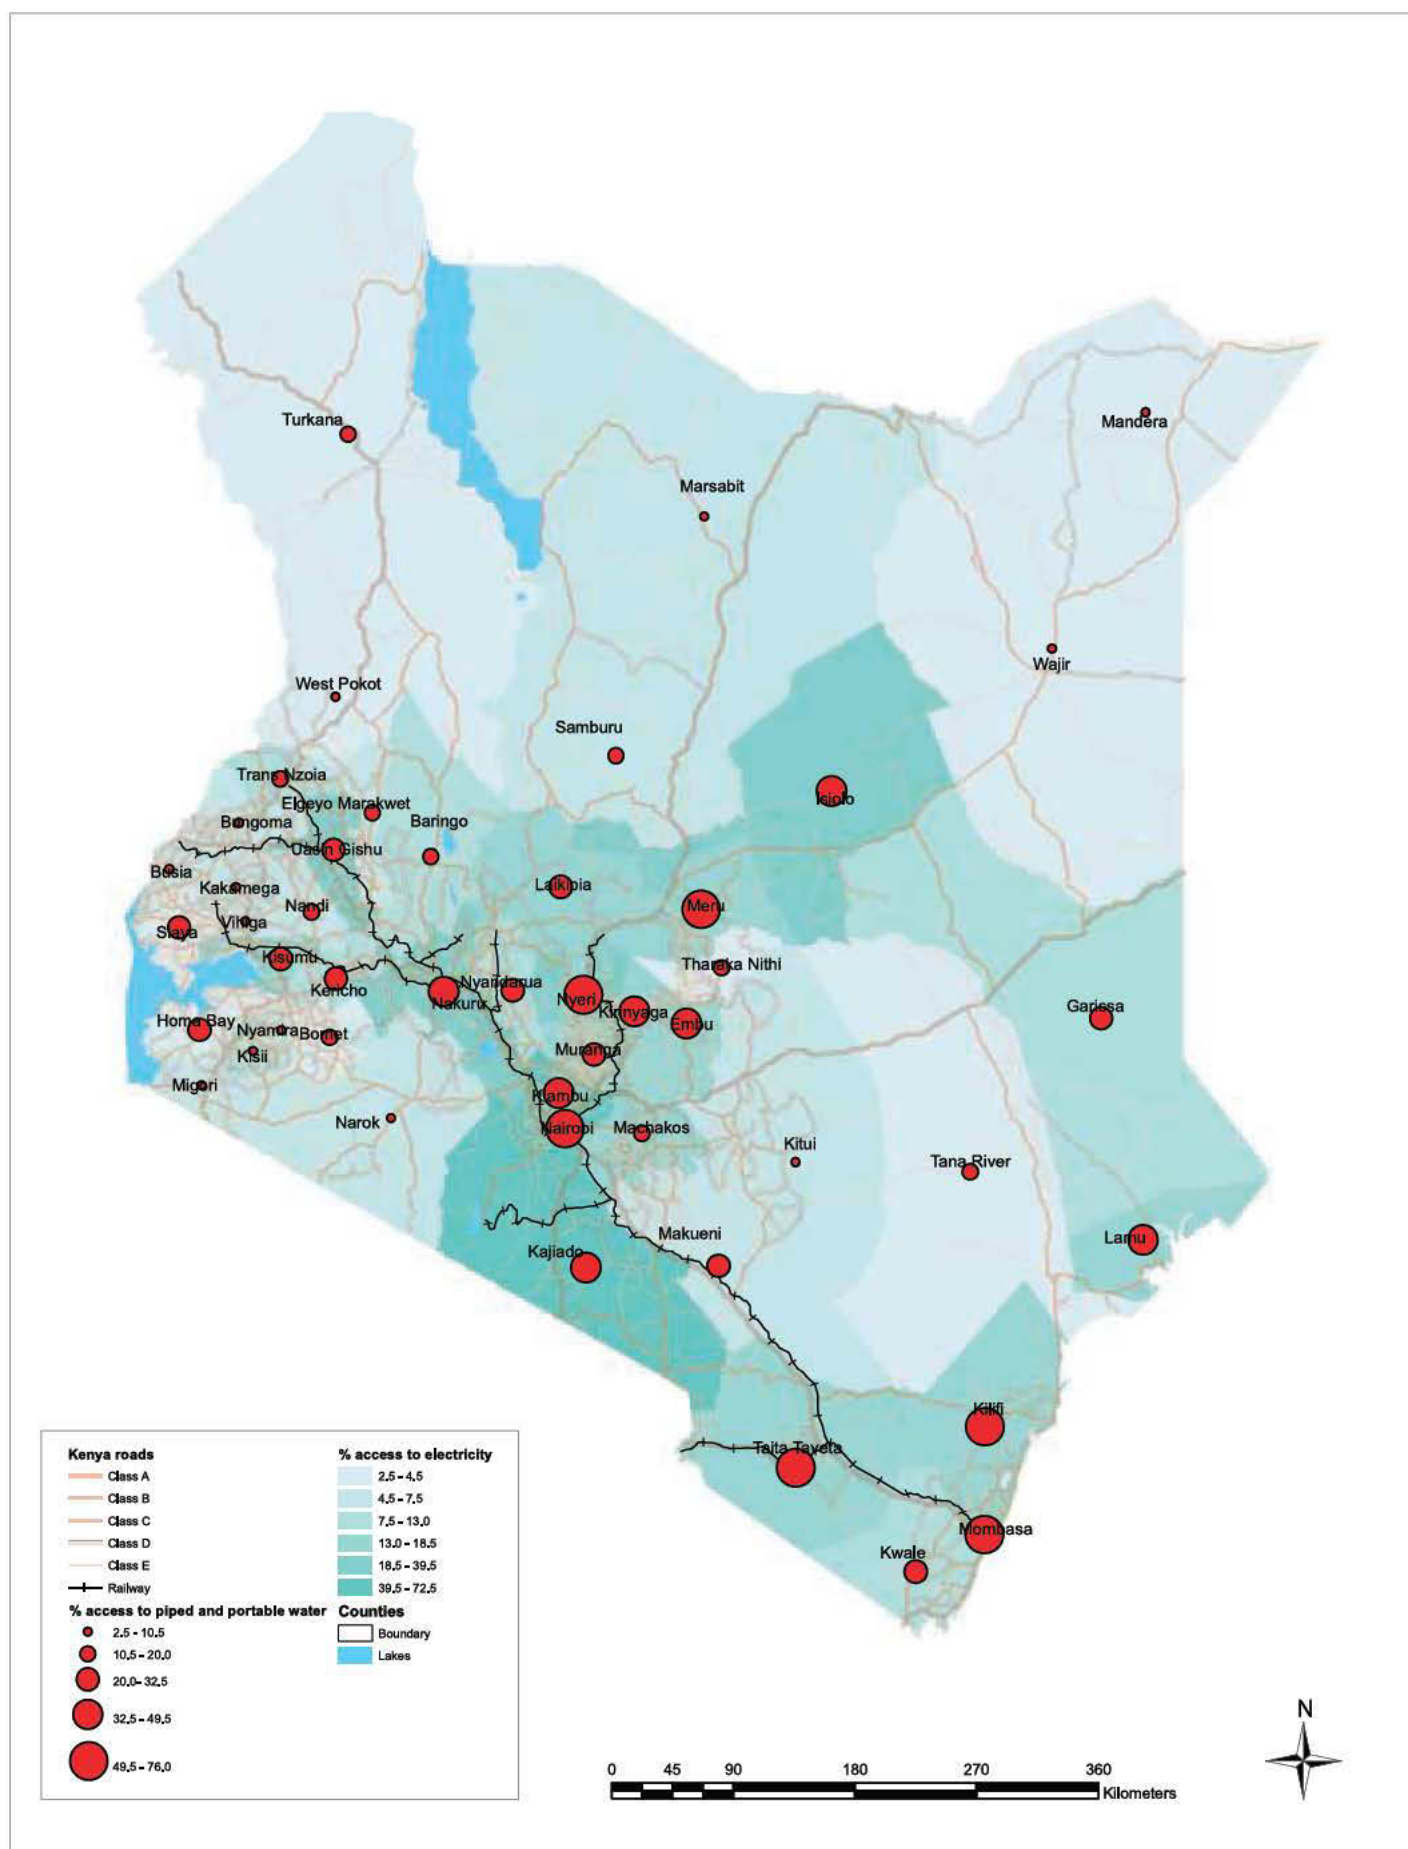

NB: The above figure is a simulation based on historical transfers to Local Authorities, and Local Authority own-revenues, as per their functions prior to devolution. The figure does not represent actual county revenues or transfers after devolution.
